

- More than 150 numbers - over 55% North American Aftermarket coverage
- Manufactured with premium materials to withstand the elements and to ensure proper function
- Grommets, screws, and other hardware are included to ensure proper fit and routing within the car chassis
- Wire harness comes with protective sleeve to prevent wires from damage

CAMSHAFT SENSORS

The Camshaft Position Sensor is a magnetic device that monitors camshaft rotation and the opening and closing rates of the valves/pistons. Camshaft Sensors work with Crankshaft Position Sensors to evaluate how the engine is performing. For the engine to operate properly, the rates of the crankshaft and the camshaft need to be in sync with each other. If the rates begin to differ, the “check engine” light in your car will come on.

- Wide coverage for Light Duty and Heavy Duty applications
- Premium construction ensures reliability and durability
- Precision engineered to meet OE form, fit, and function
- 3 year 36,000 mile warranty on all products
