

- More than 200 numbers - over 60% North American Aftermarket coverage
- Manufactured with premium materials to withstand the elements and to ensure proper function
- Grommets, screws, and other hardware are included to ensure proper fit and routing within the car chassis
- Wire harness comes with protective sleeve to prevent wires from damage

CRANKSHAFT SENSORS

The Crankshaft Position Sensor is an electronic device that monitors the position and/or rotation speed of the crankshaft. The sensor communicates with the vehicle's computer to control ignition timing and fuel injection. It works with the Camshaft Position Sensor to monitor the position of the valves and pistons. The Crankshaft Position Sensor also measures engine speed in revolutions per minute.

- Designed to protect the sensor against electro-magnetic interference
- Wide market coverage for European, Asian, and Domestic vehicles
- Engineered to meet OE form, fit, and function
- 3 year 36,000 mile warranty on all products
