

CAMSHAFT POSITION SENSORS

What does a Camshaft Position Sensor do?

The Camshaft Position Sensor monitors camshaft rotation and the opening and closing rates of the valves/pistons. Camshaft Sensors work with Crankshaft Position Sensors to evaluate how the engine is performing.

Where is the Camshaft Position Sensor located?

The Camshaft Position sensor is usually located in the cylinder head of the engine

Will a malfunctioning Camshaft Position Sensor illuminate the check engine light?

Yes. When the measurements of the Camshaft Position Sensor and the Crankshaft Positioning Sensor differ, it will trigger the Check Engine Light on the dashboard.

What are the common causes of failure?

Often, these sensors fail due to high temperatures.

How to determine if these sensors are malfunctioning:

An Automotive professional will use specialized tools to measure RPM and other data to determine if the sensor is malfunctioning.

What makes Holstein Camshaft Position Sensors the best?

- Holstein focuses on using only the highest quality materials, manufactured to exacting standards for an aftermarket product that is truly built to match or exceed the OE part
- Holstein Camshaft Position Sensor line has superior coverage for domestic and import applications
- 3 Year / 36,000 mile warranty on all Holstein Camshaft Position Sensors
